

Name: _____ Date: _____

Fact finder

- Solve addition and subtraction missing number problems
- Find patterns of similar calculations

You will need:

- counting objects, such as buttons and blocks

$$7 + \square = 11$$

$$12 - \square = 10$$

$$10 + \square = 12$$

$$13 - \square = 8$$

$$8 + \square = 13$$

$$11 - \square = 7$$

$$11 + \square = 14$$

$$15 - \square = 9$$

$$9 + \square = 15$$

$$14 - \square = 11$$

What to do

- Ask your child to complete each addition calculation, and draw a line first to the place the Fact Finder has visited that shows the missing number, and then on to the related subtraction fact.
- On the back of this sheet, ask your child to write other addition facts to 10 or 15. Then together find and write a related subtraction fact for each.

You can involve your child in adding and subtracting at home, e.g. "I've got 12 plates but only need to use 4. How many shall we put away?"
