Measuring capacities

Estimate and measure capacities

You will need:

- tea cup, egg cup, plastic beaker
- spoon
- rice, pasta, water or lentils

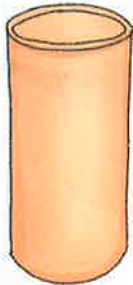

I think it will hold spoonfuls.

It held spoonfuls.

I think it will hold spoonfuls.

It held spoonfuls.

I think it will hold spoonfuls.

It held spoonfuls.

holds least

holds most

Teacher's notes

Ensure children have access to the three containers and a spoon. Using rice, pasta, water or lentils children estimate the number of spoonfuls per item. They then measure and record the number of spoonfuls the containers hold. Finally, children draw pictures to show the containers in order of capacity.
