

*Addition and Subtraction*

Learning Objective:  
To recognise number patterns  
in addition and subtraction

*If I know...*

$$5 + 3 = 8$$

*I also know...*

$$4 + 4 = 8$$

$$3 + 5 = 8$$

What happens to these numbers?

If I know...  $5 + 3 = 8$

I also know...  $4 + 4 = 8$

$3 + 5 = 8$

If I know...  $5 + 3 = 8$

I also know..  $4 + 4 = 8$

$$3 + 5 = 8$$

What happens to these numbers?

As these number decrease,

The answers  
stay the  
same.

If I know...  $5 + 3 = 8$

I also know...  $4 + 4 = 8$

$$3 + 5 = 8$$

these numbers increase.

Fill in the missing numbers. What pattern can you spot here?

If I know...  $7 + 3 = 10$

I also know...  $\underline{\quad} + 4 = 10$

$5 + \underline{\quad} = 10$

Fill in the missing numbers. What pattern can you spot here?

If I know...  $16 - 6 = \underline{\quad}$

I also know...  $16 - \underline{\quad} = 9$

$$16 - \underline{\quad} = 8$$

Fill in the missing numbers. What pattern can you spot here?

If I know...  $17 + 6 = 23$

I also know...  $16 + \underline{\quad} = 23$

$$15 + \underline{\quad} = 23$$

# Train patterns

Date: \_\_\_\_\_

Recognise patterns in addition and subtraction

Task: Use your knowledge of addition and subtraction to complete the 'train patterns' activity.

Remember: Use a number line for support and always check your calculations by using the inverse!
