

WALT: look for different types of plants.

Where could we find plants around
our home?

We will probably find flowers and weeds. They are both plants.

Flowers usually have a stem, leaves and petals. We have normally planted them.

Weeds are plants that grow in places we do not want them.

On our walk think about:

Are the plants weeds or flowers?

What is different about the plants?

What is the same about the plants?

Look carefully at the shapes and
colours.

Have a go at drawing a detailed picture of a plant that you find.
