

Division using the formal written method (2)

Use the formal written method to calculate $HTO \div O$

Challenge 1

Sort the cards into multiples of 3, 8, 9 and 12. You can use the same multiple more than once.

Challenges 2, 3

1 New resources have arrived in school and need to be divided between the numbers of classes shown. What is the approximate number each class will receive?

Example
 $462 \div 6 \rightarrow 480 \div 6 = 80$

paper clips	pencils	tacks	butterfly clips	little sharpeners
462	288	528	396	315
Share between	Share between	Share between	Share between	Share between
6 classes	6 classes	6 classes	4 classes	5 classes
3 classes	8 classes	8 classes	9 classes	7 classes
7 classes	3 classes	4 classes	6 classes	3 classes

2 Choose three resources from above. Share the resources between the classes to find out exactly how many they would receive of each. Use the formal written method.

Example

	H	T	O
		7	7
6	4	6	2

Challenge 3

Check two of your answers from each set using the inverse operation. Choose the method of multiplication that you find the easiest or that is the most efficient.
