

Investigating diagonals

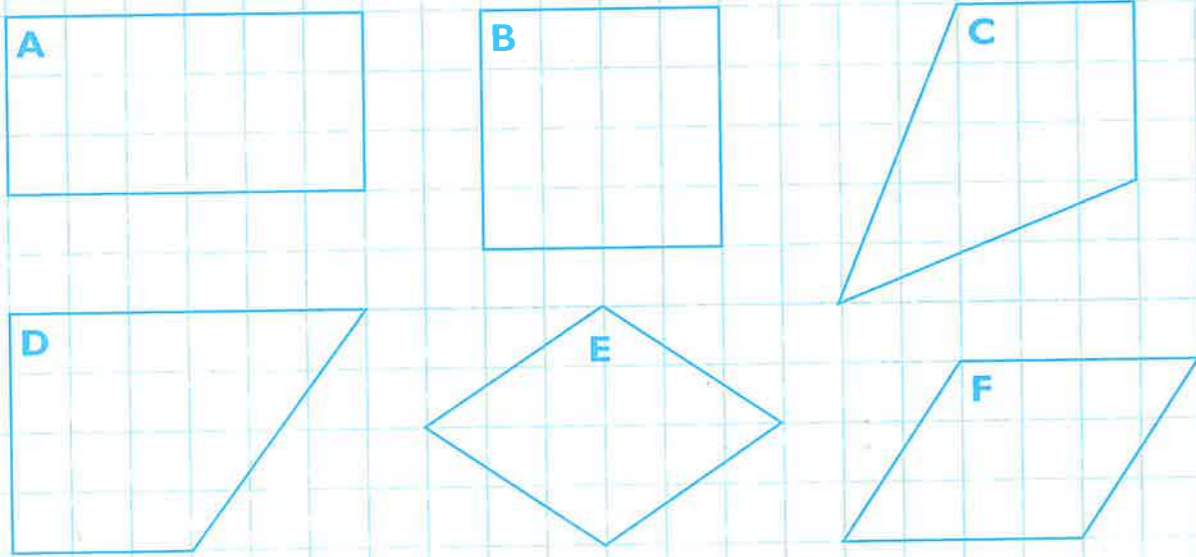

Classify quadrilaterals

- Copy each quadrilateral on to 1 cm squared paper.
- Draw in the diagonals.
- Below each shape write its name.
- Draw in red the diagonals which intersect at right angles.

quadrilateral names:
square, rectangle, rhombus,
trapezium, parallelogram, kite

You need:

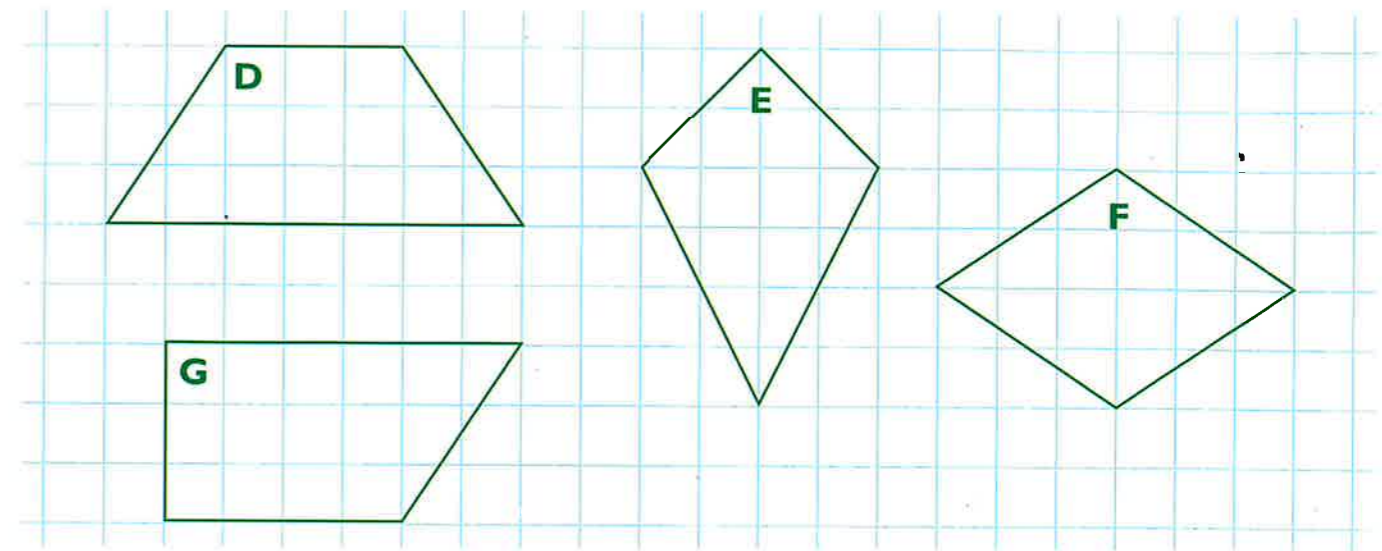

- 1 cm squared paper
- red pencil

- Copy these quadrilaterals on to 1 cm squared paper.
- Draw in the diagonals and cut out each shape.

You need:

- 1 cm squared paper
- ruler
- scissors

- Copy and complete. Mark ✓ for yes and ✗ for no. Find the answers by folding and measuring.

Property	Quadrilateral						
	A	B	C	D	E	F	G
4 sides equal	✓	✗	✗				
4 angles equal	✓						
diagonals are same length							
diagonals cut each other in half							
diagonals intersect at right angles							
a diagonal is an axis of symmetry							

Diagonals of rectangles and parallelograms.

- Investigate this statement.
The diagonals of any rectangle are equal and bisect each other.
- Draw about 6 different parallelograms on 1 cm square dot paper. Draw in the diagonals. For each parallelogram, measure the diagonals from the vertices to the intersection. Write what you notice.
- Compare your results for questions 1 and 2. In what ways are the diagonals of rectangles and parallelograms similar? Different?

You need:

- 1 cm square dot paper
- ruler
