

Subtraction triangles

In a subtraction triangle the number in the middle of each side is the difference of the two numbers at the two corners.

Example:

Two numbers are missing from the empty circles.
Put -1 and 6 in the circles.
 $1 - (-1) = 2$; $7 - (-1) = 8$; $7 - 1 = 6$.

- Complete these subtraction triangles by finding the missing numbers.

This subtraction triangle has two solutions.
